

Sustainability Policy – Travertine Thin Stone Veneer

At EliteAzure we are committed to creating high-performance building materials that minimize environmental impact while enhancing architectural design.

1

Material Responsibility

- Our thin stone veneer is made with a blend of natural stone powder, clay, and water-based acrylic binders, reducing reliance on virgin materials.
- We incorporate non-toxic, inorganic pigments and low-VOC components to support healthier indoor and outdoor environments.

2

Resource Efficiency

- At only 1/8" thick, our veneer uses significantly less raw material than full-thickness stone, reducing extraction and transport emissions.
- Lightweight and flexible design lowers shipping weight and reduces structural load, enabling more efficient construction and retrofitting.

3

Durability & Waste Reduction

- Engineered for long-term performance in both interior and exterior applications, helping reduce the need for frequent replacement.
- Excess material and offcuts can be repurposed or disposed of with minimal environmental impact due to the product's inert composition.

4

Sustainable Building Contribution

- May contribute toward LEED credits in categories such as:
 - Low-Emitting Materials
 - Regional Materials (when applicable)
 - Material Optimization & Waste Reduction
- Suitable for use in projects seeking green building certification or aligned with ESG goals.

5

Packaging & Logistics

- We strive to use minimal, recyclable packaging wherever possible and optimize logistics to reduce carbon footprint in transportation.

6

Our Commitment

We continuously evaluate and improve our processes to align with evolving sustainability standards, offering products that empower architects, builders, and developers to design with responsibility and impact.
